13- write a program to reverse number in string

```
In [1]:   1  print(":Puneeth K:".center(20))
          2  num_str="12345"
          3  reversed_str=num_str[::-1]
          4  print("reversed number:",reversed_str)
```

```
     :Puneeth K:
reversed number: 54321
```

14-Write a program to guess number using reandom

```
In [2]:   1  print(":Puneeth K".center(20))
          2  import random
          3  number=random.randint(1,10)
          4  guess=0
          5  while guess!=number:
          6      guess=int(input("Guess a number"))
          7      if guess<number:
          8          print("Guess a higher number")
          9      elif guess>number:
         10          print("Guess a lower number")
         11      else:
         12          print("You guessed correctly",number)
```

```
     :Puneeth K
Guess a number5
Guess a higher number
Guess a number7
Guess a higher number
Guess a number6
Guess a higher number
Guess a number8
You guessed correctly 8
```

```
In [ ]:   1
```
